COMPANY PROFILE

TALICA Consulting Inc. is a Corporation operating primarily in North America. Most of our customers are heavy-industrial / industrial companies or engineering firms and include world leaders. We also manage projects for commercial companies and educational institutions.

TALICA believes in teamwork, employee empowerment and partnerships with our customers. Our strength comes from our knowledge of Project Management Principles and Practices and our ability to integrate all aspects of a project in order to meet or exceed the project requirements of our customers.

TALICA focuses on delivering **Project Management Services**, managing projects from beginning to end. We do not simply consult; we can manage our customers' entire project in order to let them concentrate on their business. We will become actively involved in the planning, designing, engineering, procurement, quality and construction aspects of the projects. Depending on our customers' needs, we can also provide these services for a specific project phase or provide only selected services. We have experience in Design-Build-Equip-Operate-Maintain type projects.

TALICA also offers **Project Management Training** for all levels, including introductory courses, advanced courses, and workshops. Corporate training is customized for the business needs of our customers. We believe in providing exams with pass/fail criteria to ensure that our customers benefit the most from the training of their employees.

Our team of professionals includes members of the Professional Engineers of Ontario ([PEO](#)), the Ordre des ingénieurs du Québec ([OIQ](#)), and the Project Management Institute ([PMI](#)). We also have staff certified as Project Management Professionals ([PMP](#)).

TALICA:

*Always innovating to successfully deliver your project
on time, on budget, and within scope.*
